Quantile path on the disjoint split (seed 42, line 189.09 Bs), Bolivia EH 2005
BPAC (higher is better)
QRF
linear QR
QRF: q=0.40 selected on training data (open marker), test BPAC 0.642
linear QR: q=0.34 selected on training data (open marker), test BPAC 0.629
Poverty accuracy PA (higher is better)
Undercoverage UC = 1 − PA (lower is better)
Leakage LE (lower is better)
Quantile q
PA and UC are redundant: under the published definitions PA = TP/(TP+FN) and UC = FN/(TP+FN), so PA + UC = 1. Bands: 95% bootstrap CI (test sample). Data: quantile_path_metrics.csv
